Dear Mrs. Searchy,

I am an active amateur radio operator and I am concerned about the passing of docket RM-7869. This docket, if passed, would seriously degrade the use of the lower segment of the 220 megahertz band where a lot of operators do weak signal work. I am opposed to the passing of this docket due to it seriously decreasing the amount of usable frequencies that others and I use on a frequent basis. Please take this into consideration and thank you for your time.

sincerely,

*James R Chastain*
